

PHASE 3

Workflow Development & Execution

1. Objective

Automate the laptop request lifecycle using Flow Designer so that manager approval, status updates, notifications and IT handoff occur with minimal manual intervention.

2. Flow Trigger

Setting	Value
When	Record is Created
Table	Laptop Request Form (u_laptop_request_form)
Purpose	Start approval process immediately after submission

The screenshot displays the ServiceNow Workflow Studio interface for a flow named "Laptop Request Form". The flow is currently in "Active" status. The "TRIGGER" section is configured with the event "Laptop Request Form Created". The trigger is set to fire when a record is "Created" in the table "Laptop Request Form [x_195525...]". There is an option to "Add filters" under the condition. The "Data" panel on the right shows the variables available for the trigger, including "Laptop Request Form Rec..." (Record), "Laptop Request Form Table" (Table), "Run Start Time UTC" (Date/Time), and "Run Start Date/Time" (Date/Time). Below the trigger, there is an "Advanced Options" dropdown and a "Close" button. The "ACTIONS" section at the bottom shows the flow is "Read-only" and has a status of "Published" for the application "Project Application".

3. Subtask 1 – Initialize Request & Set Default Status

Action: Update Record. Set Status to Pending Approval. This ensures every new request begins in a controlled state.

Laptop Request Form Active

View: Test Edit flow Deactivate

ACTIONS

1 **Update Laptop Request Form Record**

Action Properties

Action: Update Record

Action Inputs

* Record: Trigg... ▶ Laptop Request For...

* Table: Laptop Request Form [x_195525...

Status: Pending Approval

+ Add field value

Data Collapse All

▶ Flow Variables

Laptop Request Form Table Table

Action Status Object

Read-only | Status: Published | Application: Project Application

4. Subtask 2 – Manager Approval Request

Action: Ask for Approval. The Manager reference field is used as the approver and the flow waits for Approval or Rejection.

Setting	Value
Approval Type	User
Approver	Manager reference field
Record to Approve	Trigger Record
Wait For	Approval or Rejection

Expected behavior: a sysapproval_approver record is created, the manager is assigned as approver, and the manager receives an approval notification.

5. Approval Notification

Element	Content
Recipient	Manager / Approver
Subject	Laptop Request Approval Required
Details	Request Number, Requester, Type, Reason
Action	Approve / Reject

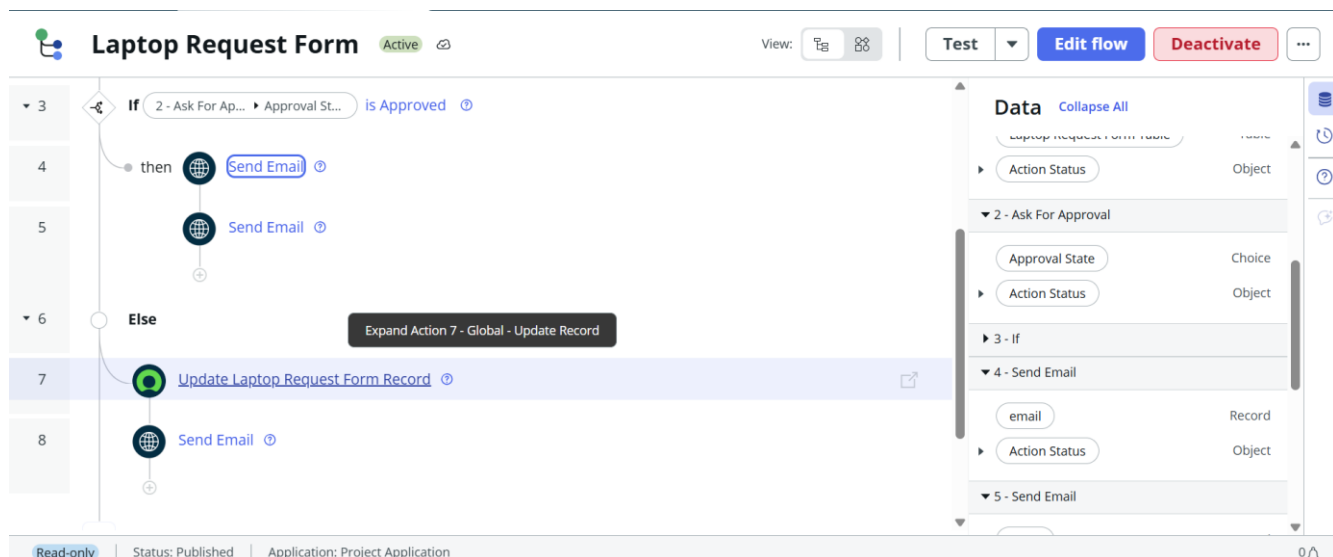

[SCREENSHOT PLACEHOLDER]

Add screenshot of approval email notification configuration.

6. Subtask 3 – Approval Decision Handling

Use an If / Else branch to evaluate the approval result.

Decision	Status	Requester Notification
Approved	Approved	Laptop Request Approved
Rejected	Rejected	Laptop Request Rejected; include rejection reason when available

2026-09-09 01:08:56	barbara@gmail.com	Laptop Request Approved 0001013	send-ready	SMTP	(empty)
2026-09-09 01:25:39	annnnnnnnnnuuuuuuuuuu@gmail.com	Laptop Request Approved 0001014	send-ready	SMTP	(empty)
2026-09-09 01:25:39	abel.tuter@example.com	Action Required : New Laptop Provisioning Request- 0001014	send-ready	SMTP	(empty)

8. Flow Lifecycle Summary

Record Created → Pending Approval → Manager Approval → Approved / Rejected → Employee Notification → IT Fulfillment for approved requests.
